# ESP-IDF. Intro I/O

IoT Node Architecture

# I/O: interact with the external world

## □ Data presentation

- Interact with users *moving* data between users and the system
- Mouse, keyboard, screen, printer...

- ❑ Communication devices between systems
  - They allow remote communication through network
  - Network Interface Card, modem..

## ❑ Data acquisition

- Communication with sensors and actuators
- The use to include (or require) ADC / DAC devices

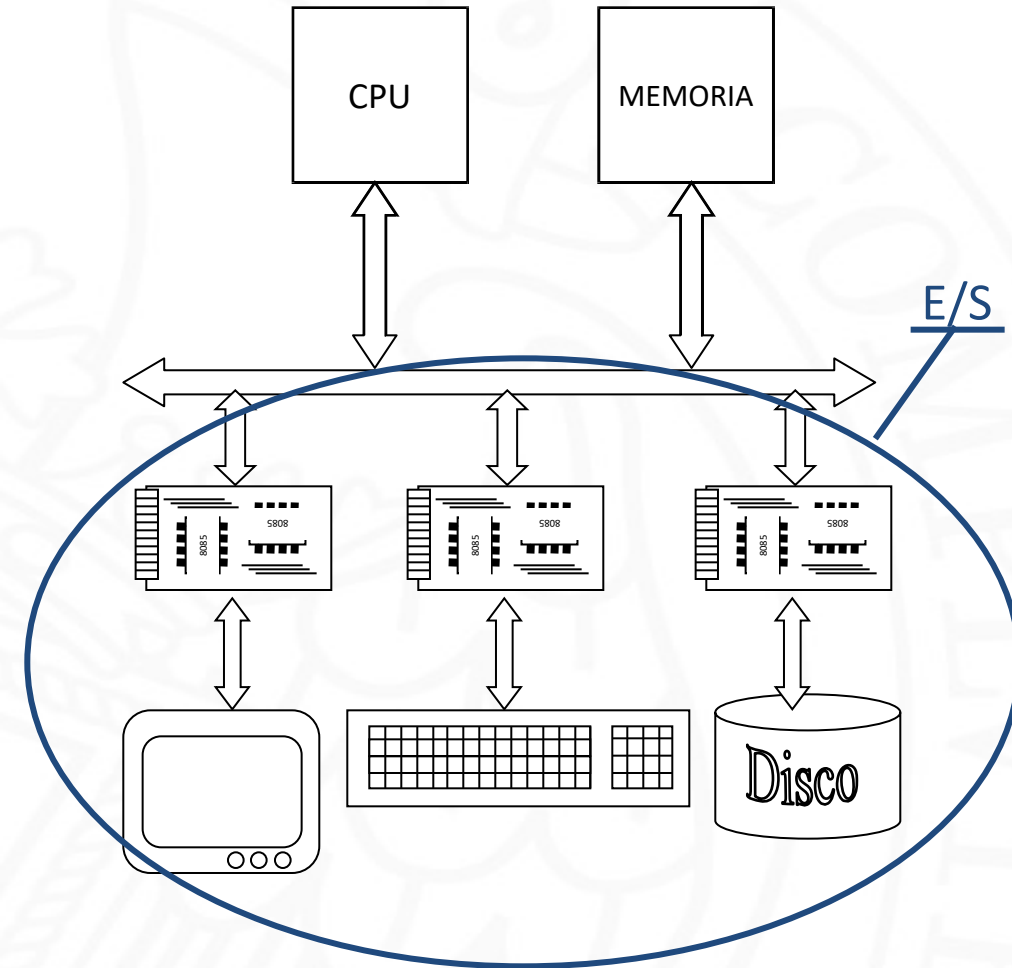

## Storage

- Flash, SD Card, magnetic...

- ❑ Interaction CPU  $\leftrightarrow$  real world
- ❑ Input
  - From devices to CPU
  - From devices to memory
- ❑ Output
  - From CPU to device
  - From memory to device
- ❑ In some scenarios, I/O performance becomes the bottleneck
  - Because it is much slower than CPU or memory

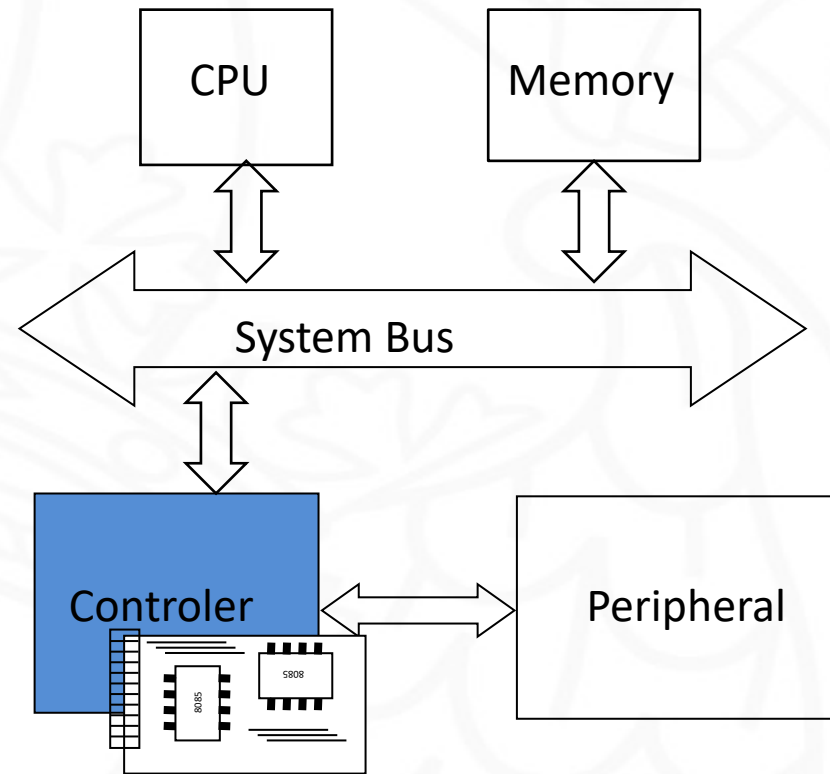

## Componentes:

- Peripheral device
- I/O device controller (hardware)  
External / SoC

- Device driver
  - Software S.O.

- Communication line
  - Bus,...

❑ Interace between device and processor

❑ Role:

- Control and timing
  - It may adapt the transfer speed
- Communicates with CPU
- Communcates with device
- Buffering
- Error detection

It has 2  
interfaces

## ❑ Isolated I/O

- Different address spaces (memory – I/O)
- Specific instructions in ISA
  - **IN** IOport, Ri (CPU ← periferial)
  - **OUT** Ri, IOPort (periferial ← CPU)
- Example: Intel x86

## ❑ Memory mapped I/O

- Same address space (memory – I/O)
- We can use regular load/store operations
  - **LOAD** Ri, IOaddr(CPU ← Peripheral)
  - **STORE** Ri, IOaddr (Peripheral ← CPU)
- Example: ARM

- ❑ We will use services provided by the OS
  - We are NOT going to write our own drivers
  - We DO NOT need to know the address of each device
    - But if you are interested.....

Bus Type	Boundary Address		Size	Target	Comment
	Low Address	High Address			
Data	0x3FF0_0000	0x3FF0_0FFF	4 KB	DPort Register	
Data	0x3FF0_1000	0x3FF0_1FFF	4 KB	AES Accelerator	
Data	0x3FF0_2000	0x3FF0_2FFF	4 KB	RSA Accelerator
