# IoT Node Architecture

*About sensors*

## □ What 's a sensor?

- “Device that receives and responds to a signal or stimuli”

Electrical Current

Vibrating Stylus

Output →

## ❑ Inertial Units (IMU)

- Accelerometre, gyroscope, compass

## ❑ Temperature, humidity

## ❑ GPS (Global Positioning System)

- GLONASS, GALILEO, BeiDOU
- Provide latitude, longitude, current time
- NMEA format

## ❑ Continuous *tracking* or spontaneous request

- Check energy consumption!

### Tripmate 850 GPS logger. NMEA output

```

```

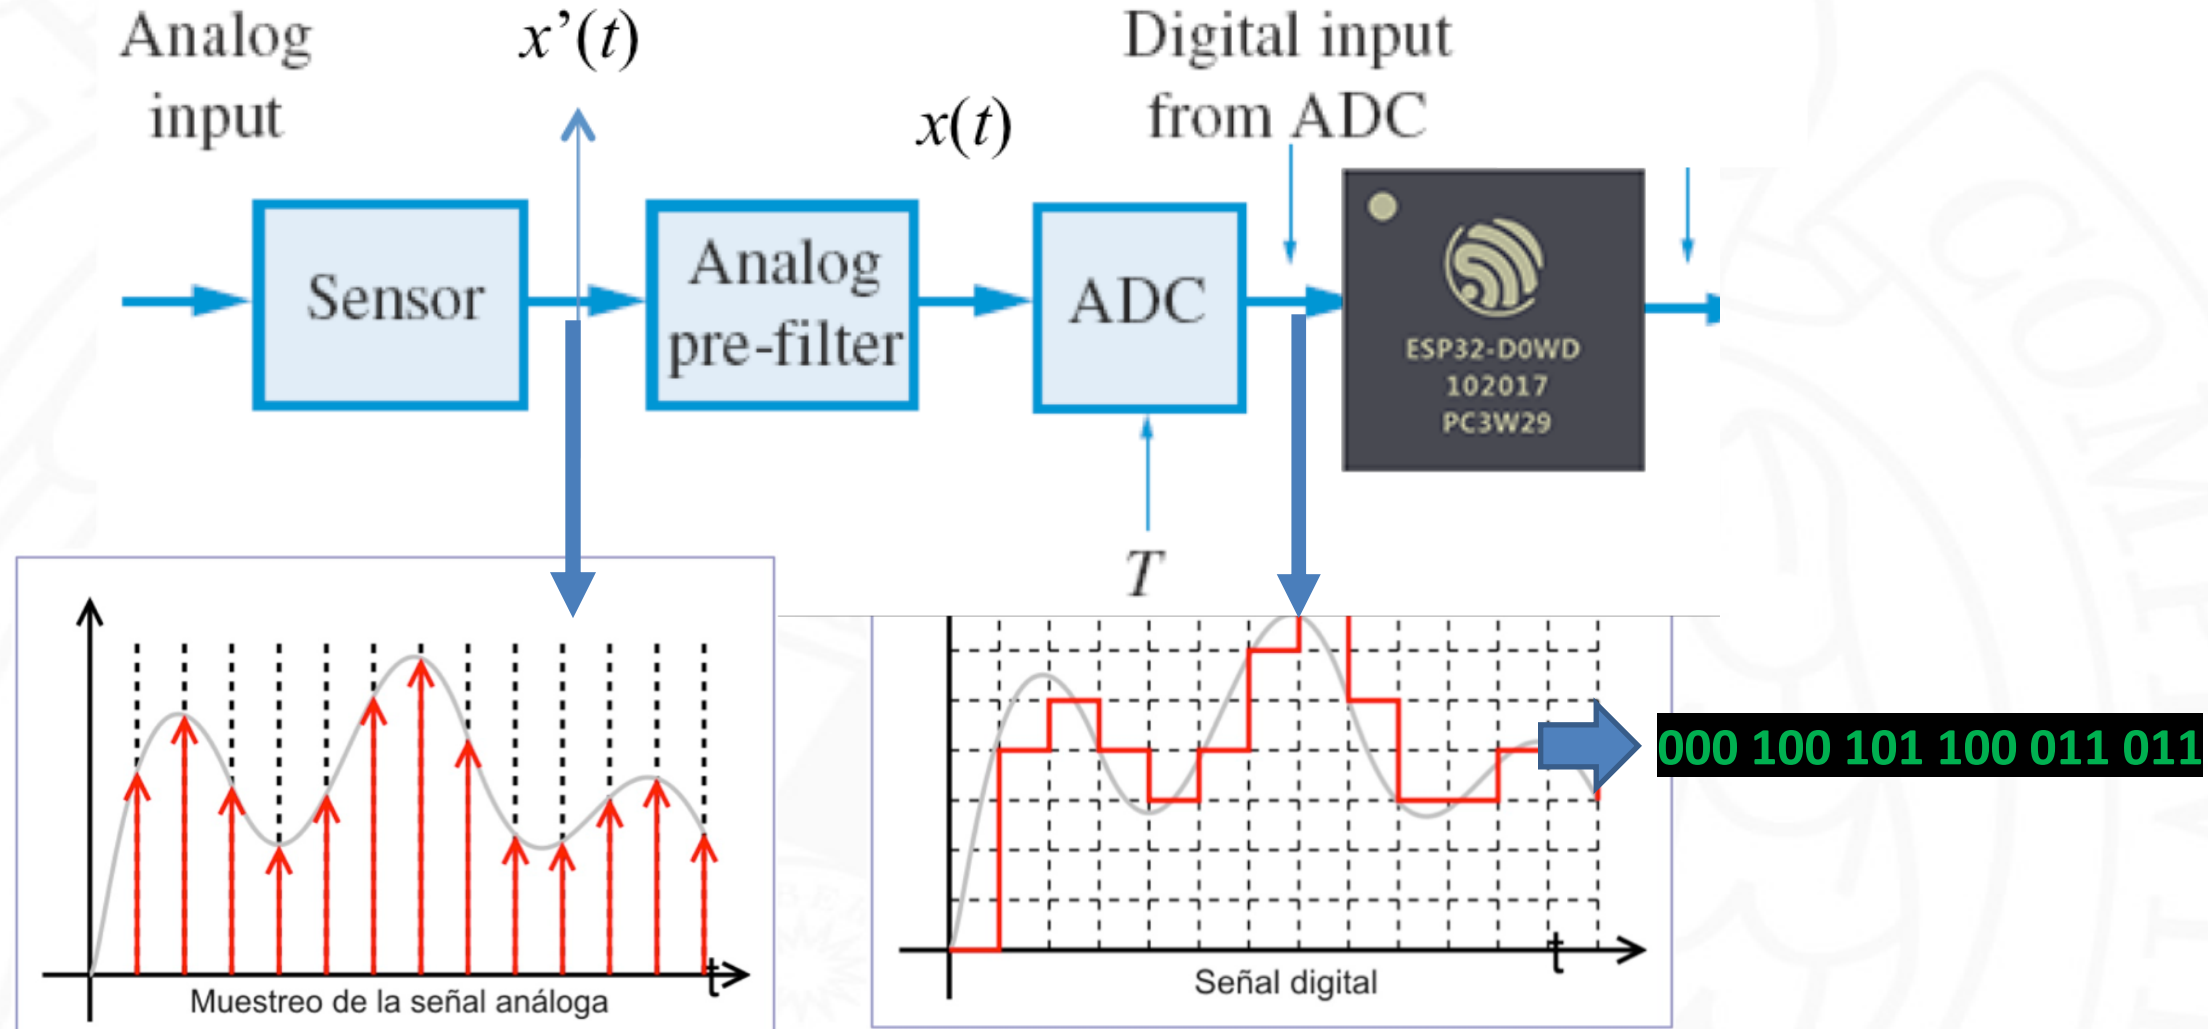

# How are we using sensors?

- ❑ They provide an electrical analog signal
- ❑ How are we translating that signal to something that our CPU can understand and handle?

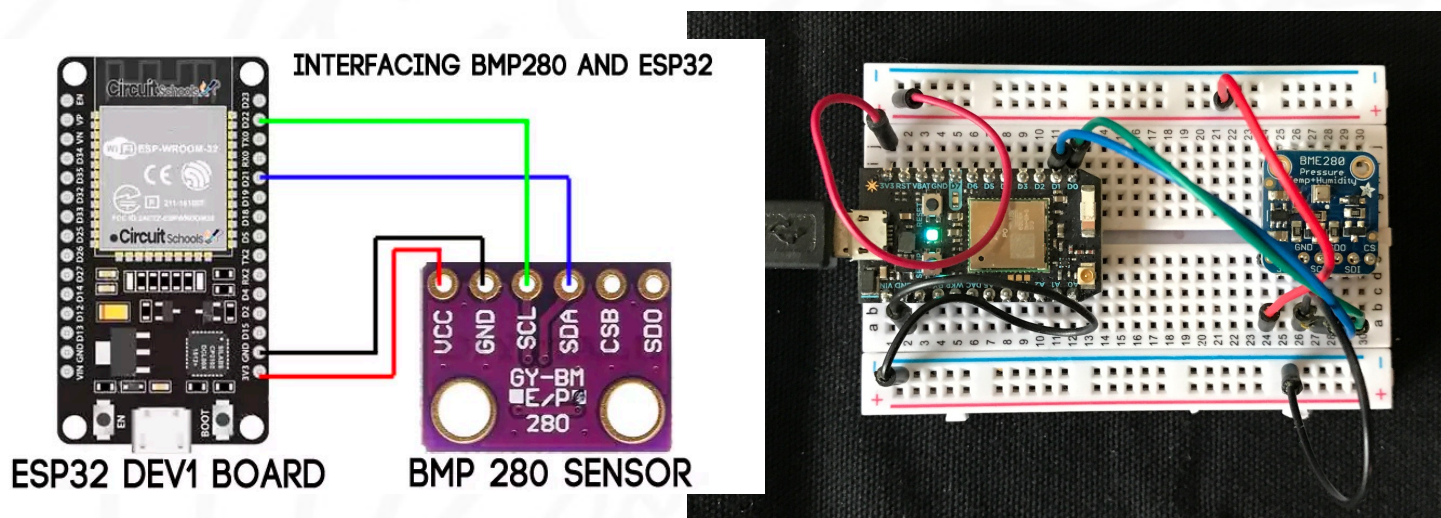

# Processors are digital!

- ❑ Dev. Boards with SoC and pins
- ❑ May have on-board sensors
- ❑ Or we may need to externally connect them
  - Directly to our ADC
  - Using standard bus: I2C, SPI, UART
    - Sensor board includes its own ADC

Placa basada en ESP32. Conexión en *protoboard*

**I2C.** Sensores de luz ambiental, temperatura, presión

**SPI.** Sensores de presión atmosférica, calidad de aire (CO)

Conversion

Spectroscopy

## □ Infrarrojos

### ■ Activos

### ■ Pasivos

## □ LIDAR

This [Leica](#) terrestrial [lidar](#)  
Fuente: Wikipedia

## □ Ultrasonic

Tank levels, containers...

Ultrasonic sensors

Wall

Detection area

- ❑ CO - CO2 - VOC
- ❑ PM 2.5 - PM 10
- ❑ Humidity - Temperature
- ❑ Ambient light
- ❑ Noise

## I2C interface

SCD41 development board

## Complete solution

## □ Biosensors

- Biological elements detect the concentration of a substance
  - Enzimas, antibodies...
- Those elements change when they contact the substance
  - Temperatura change, resistance, colour...
- A transducer reads that change and transform it in electrical signal

1 - no contamination, alarm - OFF  
 2 - contamination, electrode response  
 3 - EMS - ON, alarm - ON

Pasternak et al, 2017.

## ❑ SmartMetering

- Electricity: Wattmetro
- Water / gas: flowmeter

## ❑ Discover leaks

- Stretch counters
- Hydrophone (acoustic)

## ❑ Careful: water is not gas

- Security: avoid sparks!

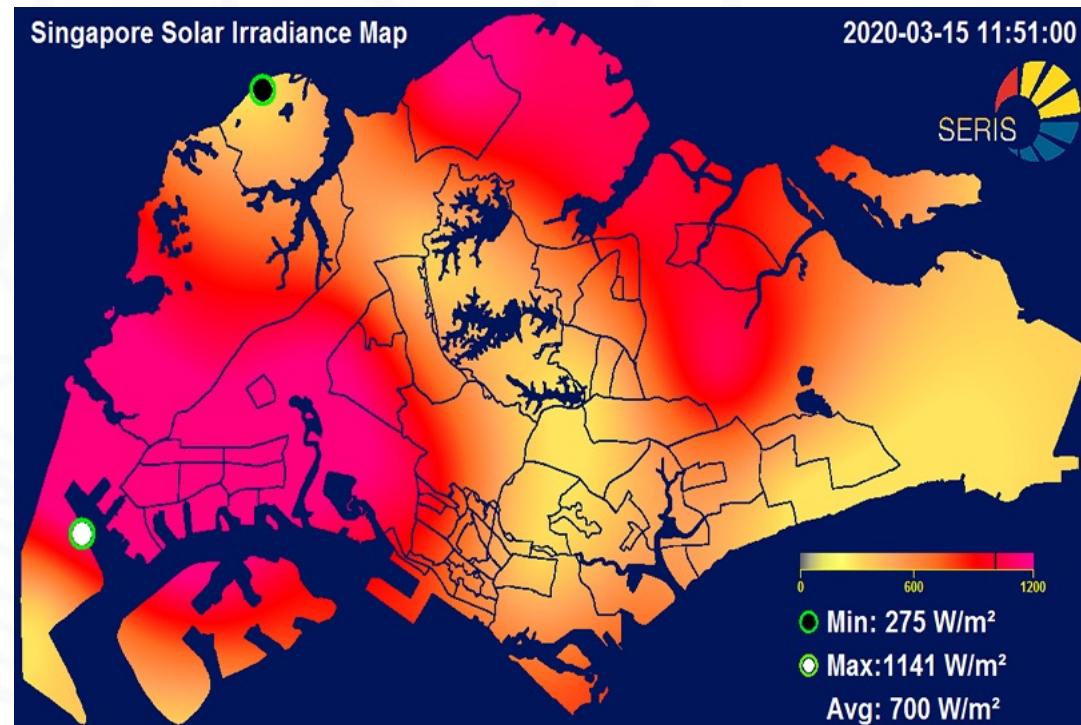

# Parking sensors

<https://www.the-iot-marketplace.com/solutions/smart-parking>

- ❑ Pyranometers
- ❑ Low cost version

<https://www.seris.nus.edu.sg/services/Real-Time-Monitoring-System-of-Irradiance.html>

- ❑ Thermal cameras for traffic management
  - More robustness to light changes

<https://www.flir.com/products/its-series/>

- ❑ Hyperspectral images
  - Green spots registration, water supply
  - Environmental sensor

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC6678368/>

## □ Air and satellite images

- Allow to detect harmful algae, too much chlorophyll, cyanobacteria...

John Lekki et al. "Airborne hyperspectral and satellite imaging of harmful algal blooms in the Great Lakes Region: Successes in sensing algal blooms" Journal of Great Lakes Research, 2019

# And regular cameras

Flexidome 8000

Inteox 7000

- ❑ Send video to the cloud is too costly
  - Bandwidth
  - Computationally expensive (not scalable)
- ❑ Many cameras ship their own processing elements
  - .... And some smart configurable process
- ❑ Machine learning is a main topic there
